

Resilience Quick Audit Checklist

Use this to spot the most common single points of failure. Score yourself and note what you'd want fixed first.

Critical Dependencies

- ☐ Do you rely on a single CDN (Cloudflare, Fastly, etc.) for public traffic?
- ☐ Is your DNS with only one provider?
- ☐ Are critical apps or data in a single cloud region?
- ☐ Is identity/login tied to one provider with no backup path?
- ☐ Do payments run through only one processor?

Recovery Readiness

- ☐ Do you have a documented runbook for a CDN or DNS outage?
- ☐ Have you tested an origin bypass or secondary path in the last 6 months?
- ☐ Can key staff still operate (or communicate) if the main site is down?
- ☐ Do you know your approximate hourly downtime cost?

Payments & Rails

- ☐ Do customers have an alternative way to pay if the main processor is down?
- ☐ Have you evaluated multi-rail options (including crypto with auto-conversion)?

Next Step

If you checked 3 or more items as gaps, a short discovery call usually surfaces the highest-ROI fix.
